

Discussion:

Standard Reports are a powerful tool in Cow Sense NxGen allowing you to gather the information you have recorded and display it to review or analyze. Treatment Reports are a type of Standard Reports designed to display information about recorded treatments or items.

For more information on the Treatments function in Cow Sense, refer to the Treatments Video Tutorials. For more information about Standard Reports, including an overview, navigation, and available options, refer to the Standard Reports Video Tutorial and the Guide to Standard Reports. This NxGen Guide is designed to supplement the information provided by those resources so you can get the most benefit from the Treatment functionality offered in this Next Generation of Cow Sense products.

Treatment Reports are located under the Standard Reports Menu in the task pane. Note: the options available for the content of the reports displayed is driven what you have selected from the Options Menu > Data Field Settings > Treatments. Options for Treatment Reports are then driven by the selections made in the Standard Report Options screen. This screen is explained further in the Guide to Standard Reports. In these examples, the selection of animal records to display is made to include all Active Animals in the reports. Available Standard Reports Layouts are Summary, List, and History.

Summary Reports:

Treatment Summary Reports options include displaying a record of Treatments, Details of Treatments, or Items in the Treatment Item Inventory. Information is displayed in a pie chart format. Navigate through Summary Report pages using the Group Browser. Again Note: the content of the reports displayed are driven by the combination of what the Treatment Fields you have selected for display from the Options Menu > Data Field Settings > Treatments AND by what selections you have made from the Standard Reports Options Screen.

List Reports:

Treatment List Reports may display information about Group Treatments, Individual Treatments, or Items in a list format.

Group Treatment reports display only treatments recorded to a group.

Group Treatment List

3 Records: Group Treatments for Active animals

Identifier	Treatment Date	Veterinarian	Treatment Class	Treatment Description	Cost per Head	Head Count
Treatment	11/30/2016		Respiratory		0	3

Item Supplier						
Indications						
Dosage						
Route						
Withdrawal						
Item Notes						
Item Active	Yes					

History Reports:

Treatment History Reports are a way to display all treatments on an animal, whether they were administered as part of a group or not. If you do not see animals on this list, check your Standard Report Options. Remember that animals are only included in reports if they are part of the group selected for display.

The screenshot shows a web browser window titled "Individual Treatment History". The browser address bar shows "/22". The main content area is titled "Individual Treatment History" and contains two sections, one for "Visual Tag: AR513" and one for "Visual Tag: AR52".

Visual Tag: AR513
